

base href breaks javascript form submit

I placed a BASE HREF tag in my application the other day. To my dismay, it somehow screwed up all of my links that submit a form. For example:

```
<a href="#" onclick="document.theForm.submit();">
```

I still am not sure what the issue is. I worked around it fairly easily so I guess I'll put off investigation for when I have the time.

But it's a very irritating little problem that took a while to diagnose.
