

Apache Monitor on Vista

This should be my last Apache/Vista x64 post.

From what I've seen, Apache Monitor won't run correctly out of the box. You'll get some lame error code like "the program completed successfully" or something like that.

What you need to do is go to your start menu, right click on the Apache Monitor, and select Properties. Go to the compatibility tab, and choose the windows XP compatibility mode. That should do it.
